

Taylor Street Seawall Earthquake Stabilization Project

About the Project

Taylor Street helps connect the Embarcadero Promenade and waterfront, including museums, restaurants, and historic maritime attractions, with the characteristics of the surrounding North Beach neighborhood. The area, which is beyond the historic Seawall, is at high earthquake risk due to the ground conditions at the shoreline and the age of the timber wharves and bulkhead that predate modern building standards, making them more vulnerable. The Taylor Street Seawall Earthquake Stabilization Project includes concepts to stabilize the shoreline and roadway between Jefferson Street and the Embarcadero Promenade.
